

**ThermoClimb
Installation Guide**

You'll need:

- Heavy staple gun
- Silicone Sealant

Spread your ThermoClimb around the frame of your attic stairs. Make sure the zipper end where you enter into the attic!

You will then use a staple gun to staple the bottom of the edges against the frame.

Remove ThermoClimb from the bag and double check your attic door and stair dimensions.

ThermoClimb Sizes

54"x25"

54"x22"

59"x25"

Adjust the Velcro straps on the outside of the ThermoClimb to fit snugly against and around the frame. Use a stapler to staple flat the cover to keep air from escaping.

Put a bead of silicone sealant along the gaps as close as you can to the stapled foot.

You will notice an improvement in your insulation almost immediately.
